## K-means para processamento de imagens

#### **Analise descritiva**

Este projeto utiliza imagens como bases de dados, definindo seus pixels como cada linha e seus valores de R,G,B como cada coluna, qualquer imagem pode ser utilizada, o algoritimo K-Means sera utilizado para diminuir a quantidade de cores da imagem comprimindo-a, gerando uma imagem que ocupe menos espaço em disco.

O algoritimo K-Means pode ser treinado em uma imagem e utilizado para predizer a coloração de uma outra, gerando resultados interessantes que serão explorados ao longo do projeto em busca de possiveis aplicações para esse processamento.

#### Fonte dos dados:

Todas as imagens utilizadas para o processamento foram coletadas diretamente do Google images.

#### Caracteristicas gerais:

- Numero de registros: As imagens utilizadas no projeto possuem resolução de 1920x1080, portanto 2073600 registros.
- Quantidade de variaveis: 3
- Dicionario de dados:
  - R: Valor da cor vermelha naquele pixel
  - G: Valor da cor verde naquele pixel
- B: Valor da cor azul naquele pixel
- Quantidade de valores ausentes por variavel:
- **R**: N/A
- **G**: N/A
- B: N/A

#### Analise descritiva das variaveis:

- **Dominio**: [0,255]
- Medidas de tendencia: (Variam de acordo com a imagem)
  - Media:
  - **Treino**: 104.142898
  - **Teste:** 100.684498
  - Mediana:
  - **Treino**: 95.0
  - Teste: 87.0
  - Moda:
  - Treino: 0
- **Teste**: 0 Medidas de dispercao: (Variam de acordo com a imagem)
  - **Treino:** 63.841369
  - **Teste**: 70.703759

#### 1. Bibliotecas

- numpy: Manipulação de dados
- scipy: Gerar moda
- pyplot: Para construção de graficos
- mplot3d: Para construção de graficos em 3 dimensões
- **sklearn:** Para utilizar o K-Means
- warnings: Desabilitar avisos do numpy

```
In [1]: %matplotlib inline
        import numpy as np
        from scipy import stats
        import matplotlib.pyplot as plt
        from mpl_toolkits.mplot3d import Axes3D
        from sklearn.cluster import MiniBatchKMeans
        import warnings; warnings.simplefilter('ignore')
In [2]: %%javascript
```

Os marcadores **%matplotlib** e **%%javascript** definem apenas opções de visualização de output do jupyter-notebook.

IPython.OutputArea.prototype.\_should\_scroll = function(lines) {

# 2. Funções

- get\_colors: Retorna um array de pixels com valores para de 0 a 1
- plot\_pixels: Cria graficos para as cores das imagens

return false;

• get\_mmm: Retorna uma tupla contento media, mediana e moda

```
In [3]: def get_colors(data):
            shape_x, shape_y, shape_z = data.shape
            data scale = data / 255.0 # use 0...1 scale
            return data_scale.reshape(shape_x * shape_y, shape_z)
        def plot_pixels(data, title, colors=None, N=10000, fig=None, plot=(1,1,1)):
            if colors is None:
                colors = data
            # choose a random subset
            rng = np.random.RandomState(0)
            i = rng.permutation(data.shape[0])[:N]
            colors = colors[i]
            R, G, B = data[i].T
            if fig is None:
                fig=plt.figure(figsize=(20,20))
            ax = fig.add_subplot(*plot,projection='3d')
            ax.scatter3D(R, G, B, color=colors, marker='.')
            ax.set(xlabel='Red', ylabel='Green', zlabel='Blue', xlim=(0, 1), ylim=(0, 1), title=title)
        def get_mmm(data):
            return (np.mean(data), np.median(data), stats.mode(data, axis=None))
```

## 3. Carregamento de imagens

Carrega imagens a serem avaliadas.

```
In [4]: img1_file = 'brasov.jpg'
        img2_file = 'mountains.jpg'
        img1 = plt.imread('images/'+img1_file)
        fig=plt.figure(figsize=(20,10))
        ax = fig.add_subplot(121)
        ax.imshow(img1);
        img2 = plt.imread('images/'+img2_file)
        ax = fig.add_subplot(122)
        ax.imshow(img2);
```

#### 4. Medidas de tendencia central

Adquire valores de media, mediana, moda e desvio padrão.

```
In [5]: mean1, median1, modal1 = get_mmm(img1)
        print('IMG1> Mean: '+str(mean1)+'
                                             Median:'+str(median1)+'
                                                                       Modal:'+str(modal1.mode)+'
                                                                                                     STD:'+str(np.std(img1)))
        mean2, median2, modal2 = get_mmm(img2)
        print('IMG2> Mean: '+str(mean2)+'
                                            Median:'+str(median2)+'
                                                                                                     STD:'+str(np.std(img2)))
                                                                       Modal:'+str(modal2.mode)+'
        IMG1> Mean: 104.14289801954733

```

## 5. Processamento

Nesta etapa sera processada a primeira imagem para treino do algoritimo K-Means em seguida utilizaremos o algoritimo treinado para predizer as versões com cores reduzidas da segunda imagem.

#### 5.1. Agrupamento de cores

```
Nesta erapa executamos o algoritimo K-Means sobre a primeira imagem, para valores diferentes de clusters (16, 8, 4, 2) e testamos este resultado na segunda imagem.
    In [6]: # Original
             img1_colors = get_colors(img1)
             img2_colors = get_colors(img2)
    In [7]: # 16 Colors
             img1_kmeans_16 = MiniBatchKMeans(16)
             img1_kmeans_16.fit(img1_colors)
             img1_16_colors = img1_kmeans_16.cluster_centers_[img1_kmeans_16.predict(img1_colors)]
             img2_16_colors = img1_kmeans_16.cluster_centers_[img1_kmeans_16.predict(img2_colors)]
    In [8]: # 8 Colors
             img1_kmeans_8 = MiniBatchKMeans(8)
             img1_kmeans_8.fit(img1_colors)
             img1_8_colors = img1_kmeans_8.cluster_centers_[img1_kmeans_8.predict(img1_colors)]
             img2_8_colors = img1_kmeans_8.cluster_centers_[img1_kmeans_8.predict(img2_colors)]
    In [9]: # 4 Colors
             img1_kmeans_4 = MiniBatchKMeans(4)
             img1_kmeans_4.fit(img1_colors)
             img1_4_colors = img1_kmeans_4.cluster_centers_[img1_kmeans_4.predict(img1_colors)]
             img2_4_colors = img1_kmeans_4.cluster_centers_[img1_kmeans_4.predict(img2_colors)]
  In [10]: # 2 Colors
             img1_kmeans_2 = MiniBatchKMeans(2)
             img1_kmeans_2.fit(img1_colors)
             img1_2_colors = img1_kmeans_2.cluster_centers_[img1_kmeans_2.predict(img1_colors)]
            img2_2_colors = img1_kmeans_2.cluster_centers_[img1_kmeans_2.predict(img2_colors)]
```

## 5.2. Graficos de resultados

Nesta etapa produzimos graficos sobre os resultados obtidos para o treino e teste do algoritimo K-Means.

0.8

1.0 0.0

0.2

0.4

0.0

0.2

0.4

1.0 0.0

### 5.3. Resultados em imagem

Nesta etapa transformamos o array de cores da imagem de volta no formato de imagem.

```
In [12]: # 16 Colors
    img1_16 = img1_16_colors.reshape(img1.shape)
    img2_16 = img2_16_colors.reshape(img2.shape)

# 8 Colors
    img1_8 = img1_8_colors.reshape(img1.shape)
    img2_8 = img2_8_colors.reshape(img2.shape)

# 4 Colors
    img1_4 = img1_4_colors.reshape(img1.shape)
    img2_4 = img2_4_colors.reshape(img2.shape)

# 2 Colors
    img1_2 = img1_2_colors.reshape(img1.shape)
    img2_2 = img2_2_colors.reshape(img2.shape)
```

## 5.4. Imagens preditas

Nesta etapa comparamos as imagens preditas pelo teste com as imagens obtidas durante o treino.

Out[13]: <matplotlib.image.AxesImage at 0x24900072ba8>

# 5.5. Validação de resultados

In [15]: # 8 Colors

Nesta etapa comparamos a clusterização da segunda imagem a partir do treino com a primeira imagem e com o treino sobre si mesma, assim podemos comparar os resultados que foram gerados com as que eram esperados.

In [14]: # 16 Colors
 img2\_kmeans\_16 = MiniBatchKMeans(16)
 img2\_kmeans\_16.fit(img2\_colors)
 img2\_l6\_colors\_fixed = img2\_kmeans\_16.cluster\_centers\_[img2\_kmeans\_16.predict(img2\_colors)]

img2\_kmeans\_8 = MiniBatchKMeans(8)
img2\_kmeans\_8.fit(img2\_colors)
img2\_8\_colors\_fixed = img2\_kmeans\_8.cluster\_centers\_[img2\_kmeans\_8.predict(img2\_colors)]

In [16]: # 4 Colors img2\_kmeans\_4 = MiniBatchKMeans(4) img2\_kmeans\_4.fit(img2\_colors) img2\_4\_colors\_fixed = img2\_kmeans\_4.cluster\_centers\_[img2\_kmeans\_4.predict(img2\_colors)] In [17]: # 2 Colors img2\_kmeans\_2 = MiniBatchKMeans(2) img2\_kmeans\_2.fit(img2\_colors) img2\_2\_colors\_fixed = img2\_kmeans\_2.cluster\_centers\_[img2\_kmeans\_2.predict(img2\_colors)] In [18]: fig=plt.figure(figsize=(20,30)) # 16 Colors plot\_pixels(img2\_colors, colors=img2\_16\_colors\_fixed,title="Correct color space: 16 colors", fig=fig, plot=(4,2,1)) plot\_pixels(img2\_colors, colors=img2\_16\_colors, title="Predicted color space: 16 colors", fig=fig, plot=(4,2,2)) # 8 Colors plot\_pixels(img2\_colors, colors=img2\_8\_colors\_fixed,title="Correct color space: 8 colors", fig=fig, plot=(4,2,3)) plot\_pixels(img2\_colors, colors=img2\_8\_colors, title="Predicted color space: 8 colors", fig=fig, plot=(4,2,4)) # 4 Colors plot\_pixels(img2\_colors, colors=img2\_4\_colors\_fixed,title="Correct color space: 4 colors", fig=fig, plot=(4,2,5)) plot\_pixels(img2\_colors, colors=img2\_4\_colors, title="Predicted color space: 4 colors", fig=fig, plot=(4,2,6)) # 2 Colors plot\_pixels(img2\_colors, colors=img2\_2\_colors\_fixed,title="Correct color space: 2 colors", fig=fig, plot=(4,2,7))

# 5.6. Comparação de imagens

Nesta etapa representamos os valores dos graficos da etapa 5.5. em forma de imagem para melhor visualização.

In [19]: # 16 Colors
img2\_16\_fixed = img2\_16\_colors\_fixed.reshape(img2.shape)

# 8 Colors
img2\_8\_fixed = img2\_8\_colors\_fixed.reshape(img2.shape)

# 4 Colors
img2\_4\_fixed = img2\_4\_colors\_fixed.reshape(img2.shape)

# 2 Colors
img2\_2\_fixed = img2\_2\_colors\_fixed.reshape(img2.shape)

```
In [20]: fig, ax = plt.subplots(4, 2, figsize=(20, 20), subplot_kw=dict(xticks=[], yticks=[]))
          # 16 Colors
         ax[0][0].set_title('Correct 16-color Image', size=16)
         ax[0][0].imshow(img2_16_fixed)
         ax[0][1].set_title('Predicted 16-color Image', size=16)
         ax[0][1].imshow(img2_16)
          # 8 Colors
          ax[1][0].set_title('Correct 8-color Image', size=16)
          ax[1][0].imshow(img2_8_fixed)
          ax[1][1].set_title('Predicted 8-color Image', size=16)
          ax[1][1].imshow(img2_8)
          # 4 Colors
          ax[2][0].set_title('Correct 4-color Image', size=16)
         ax[2][0].imshow(img2_4_fixed)
         ax[2][1].set_title('Predicted 4-color Image', size=16)
         ax[2][1].imshow(img2_4)
          # 2 Colors
          ax[3][0].set_title('Correct 2-color Image', size=16)
         ax[3][0].imshow(img2_2_fixed)
         ax[3][1].set_title('Predicted 2-color Image', size=16)
         ax[3][1].imshow(img2_2)

# Correct 16-color Image

Correct 8-color Image

Correct 4-color Image

Correct 2-color Image

Predicted 16-color Image

Predicted 8-color Image

Predicted 4-color Image

Predicted 2-color Image

## 6. Conclusão sobre resultados obtidos até então...

Ao executar o algoritimo K-Means sobre os pixels de uma imagem separamos em clusters os pixels de acordo com as suas cores, dessa maneira podemos definir a todos os membros de um cluster um so valor de R, G, B, reduzindo o numero de cores na imagem, tornando menor o espaço necessario para armazenamento.

Ao treinar o algoritimo com uma imagem e aplica-lo em outra nota-se que as cores da imagem que treinou o algoritimo são aplicadas sobre as cores da segunda imagem efetivemante substituindo sua paleta de cores pela paleta de cores da primeira. O algoritimo tenta predizer qual seria as cores da forma reduzida da segunda imagem utilizando cores geradas a partir da primeira, a cor mais proxima da sua paleta de cores sera aplicada no lugar da cor da segunda imagem.

Se compararmos a quantidade de detalhes apresentados na segunda imagem quando gerada a partir de sua propria paleta e quando gerada a partir da paleta da primeira imagem, notamos que ambas evidenciam diferentes detalhes e bordas na imagem.

Futuramente pretendo treinar o algoritimo com um maior numero de imagens e fazer associações com os resultados obtidos, pretendo encontrar padrões de cores em certas categorias de imagens e combinar os resultados de diferentes paletas aplicadas a uma imagem para evidenciar atributos da imagem. Vou explorar outras ideias com o desenrolar do projeto, espero encontrar ainda mais possiveis associações para serem feitas com os dados obtidos.
